Intensive care unit mortality after transcatheter aortic valve implantation. Transcatheter aortic valve implantation (TAVI) has been rapidly adopted for patients with aortic stenosis. However, increased mortality after TAVI remains a major limitation of this technology. This study sought to evaluate intensive care unit (ICU) mortality after TAVI and its determinants. We retrospectively identified all patients with symptomatic aortic stenosis treated with TAVI between January 2010 and September 2016 in our high-volume centre. Patient characteristics, haemodynamics and ICU course data were collected. A total of 252 TAVI procedures were performed during the study period. Sixty-six percent of patients were hospitalised for angina pectoris. There were no in-hospital deaths. Twenty-eight patients (11%) were admitted to the ICU for a median (IQR) of two (1-4) days. Median (IQR) ICU and hospital lengths of stay were 2 (1-5) and 6 (4-8) days, respectively. At the time of the first recorded ICU evaluation, median (IQR) systolic and mean aortic gradients were 30 (23-35) mmHg and 13 (11-18) mmHg, respectively. The median (IQR) transprosthetic gradient measured during ICU was 6 (5-7) mmHg. Twenty-two patients (79%) had transient changes in haemodynamic status. Three patients (11%) experienced severe haemodynamic instability and one patient (

Though Donald Trump's campaign has reported just a fraction of the funds that Hillary Clinton's campaign has amassed, the GOP nominee is widely expected to be able to raise a substantial amount of money. The Republican National Committee has raised $59 million as of Sept. 30 and could have more than $120 million on hand at the end of October, according to federal filings. Trump's campaign has raised about $23 million. Both Clinton and Trump are expected to raise large amounts of cash from donors in the entertainment industry. Clinton has raked in more than $20 million from "mega-donors" since the end of May, according to Federal Election Commission filings. One of Clinton's biggest fundraisers is Haim Saban, a donor who has been very influential with the Clinton campaign. Saban is the majority owner of the Los Angeles-based entertainment company Saban Brands, which owns DreamWorks Animation, the producer of "Shrek." Saban has donated at least $1 million to the Clinton campaign. His wife Cheryl contributed at least $400,000. "Haim Saban and Cheryl Saban have each made at least one personal and at least one maximum donation of $2,700 to Hillary for America, respectively, in this cycle," the Clinton campaign said in a statement to The Hill. The Clinton campaign has also received support from top Hollywood personalities like filmmaker Steven Spielberg and Marvel executive Victoria Alonso. Clinton was the first female nominee of a major party, but her bid has been overshadowed by Trump's remarks about women, as well as by the release of the "Access Hollywood" tape. Clinton's campaign is leading in the polls, but Trump has been buoyed by his campaign's success in raising money. Republican strategist and Trump supporter Barry Bennett said the billionaire is a1d647c40b

This invention is related to the field of sports and recreation and in particular to apparatus for the practice of volleyball. Volleyball is a popular sports which has become an integral part of the recreational activities of many Americans and many of the international games are played on a volleyball court. Conventional volleyball is played on a volleyball court wherein the court is located between a back line and a front line and is divided by a net, usually located in the center, which prohibits players from hitting the ball over the net or into the net. It is also possible to play a variation of volleyball called "jump ball" wherein the players throw the ball into the air and catch the ball before it falls back to the ground. In the practice of volleyball, there are two basic roles, the "server" and the "volleyer". The server tries to hit the ball so that the volleyer can hit the ball to pass it to the server. This can be done from the front or the back of the court. However, the volleyer cannot aim the ball at a goal that is located more than six feet from the end of the court. Accordingly, there are two basic problems associated with the game of volleyball. First, as to the server, it is desirable that the ball be accurately hit so as to enable the volleyer to pass the ball to
